Dear Octopus Energy

Just wanted to say thank you for such a easy transition in getting information, price and cheaper renewable energy.

It is a breath of fresh air to speak to a company in plain language. Everything was made clear and an email was sent within 10 minutes fully explaining what we had discussed and I had agreed to.

No contract to sign up to. No exit fees to pay 'IF' i wanted to switch.

I trust Octopus Energy will go from strength to strength and blow the big 6 out of the water.AND just got my first £50 referral fee talk about savings.

Been with octopus now for 12 months

Been with octopus now for 12 months, by far the best company I have ever dealt with. Clear pricing and bills, monthly reminders for metre readings and easy to use website. If I've asked them anything they respond straight away. Hopefully won't ever need to move energy providers again thanks to octopus.

Why does this work?

5p plastic bag tax = 95% reduction in use

Consumers know energy cost varies through the day

Agile gives them the tool to take advantage

Car charge at night

Washing machine use on a sunny day

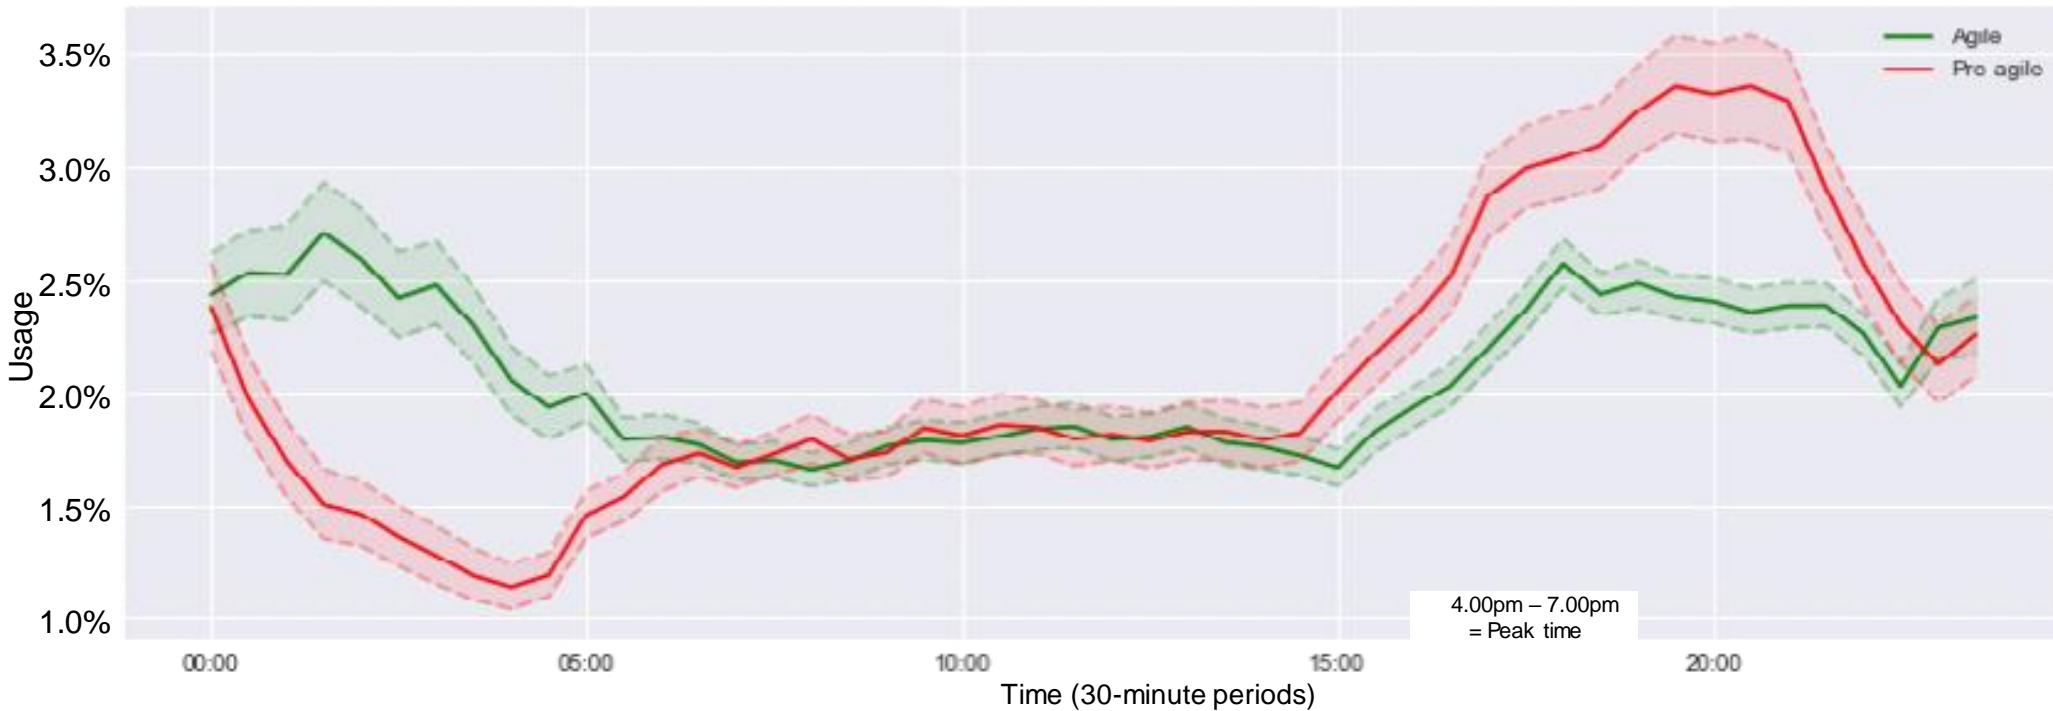

Agile Octopus: Powering the way to a low carbon future

Agile customer cohort	Annual savings vs Octopus 12M Fixed Tariff	Annual Savings vs Big 6 average SVT
Full sample	£45	£188
Top 25% most engaged	£91	£229
Bottom 25% most engaged	£0.80	£170
EV drivers	£132	£338

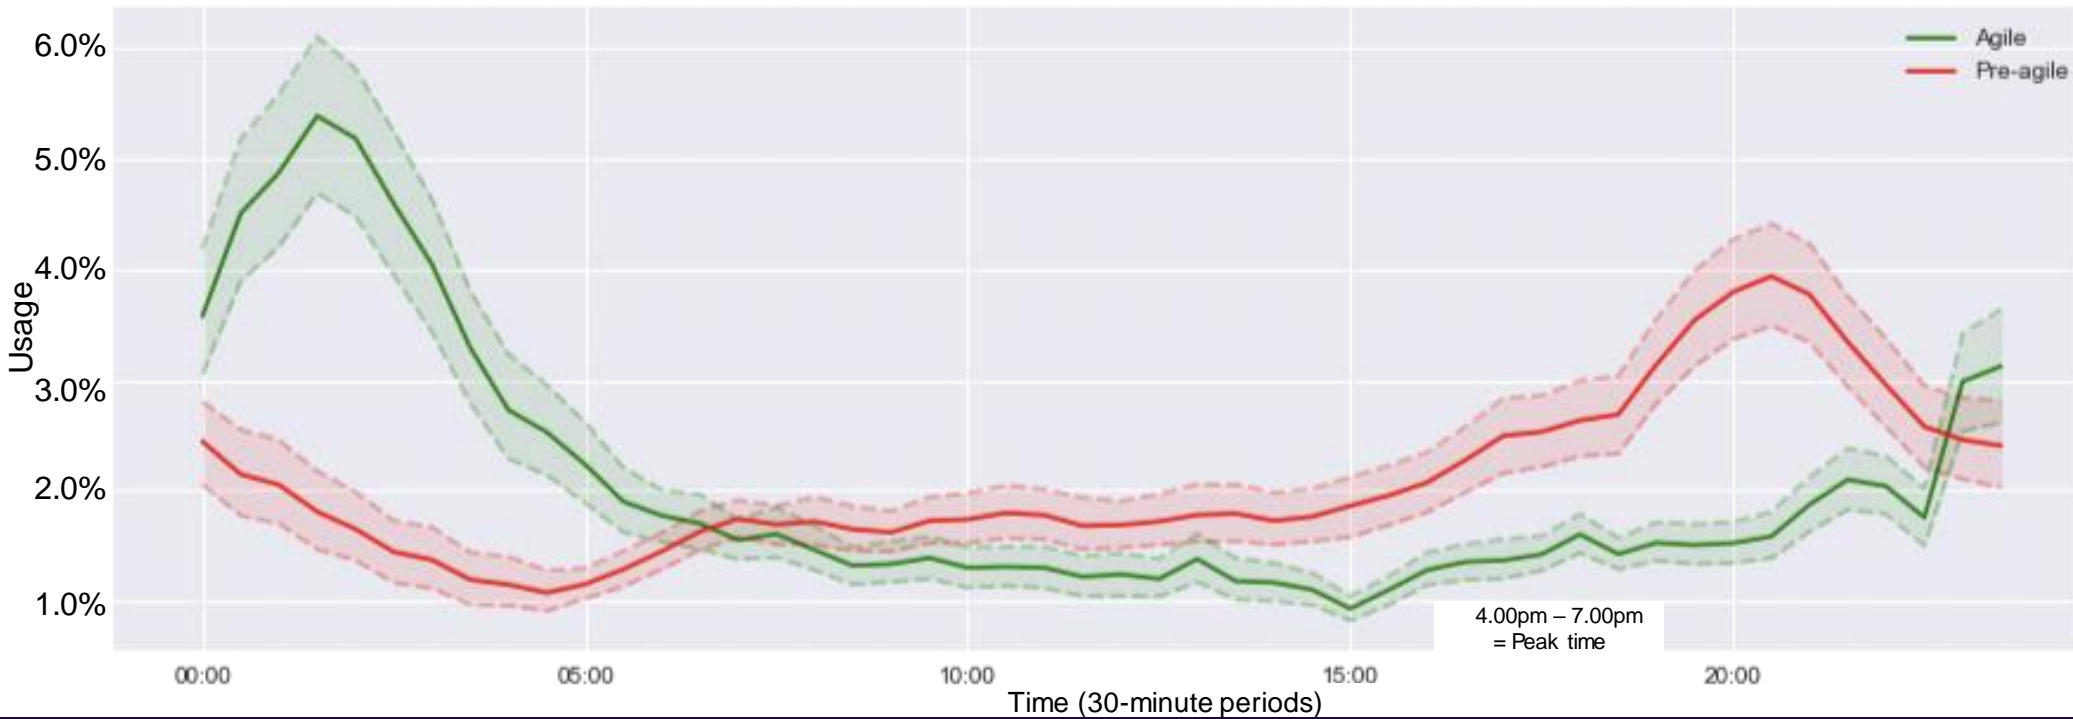

EV drivers demonstrate the greatest sensitivity to price signals.

Behaviour change of whole cohort

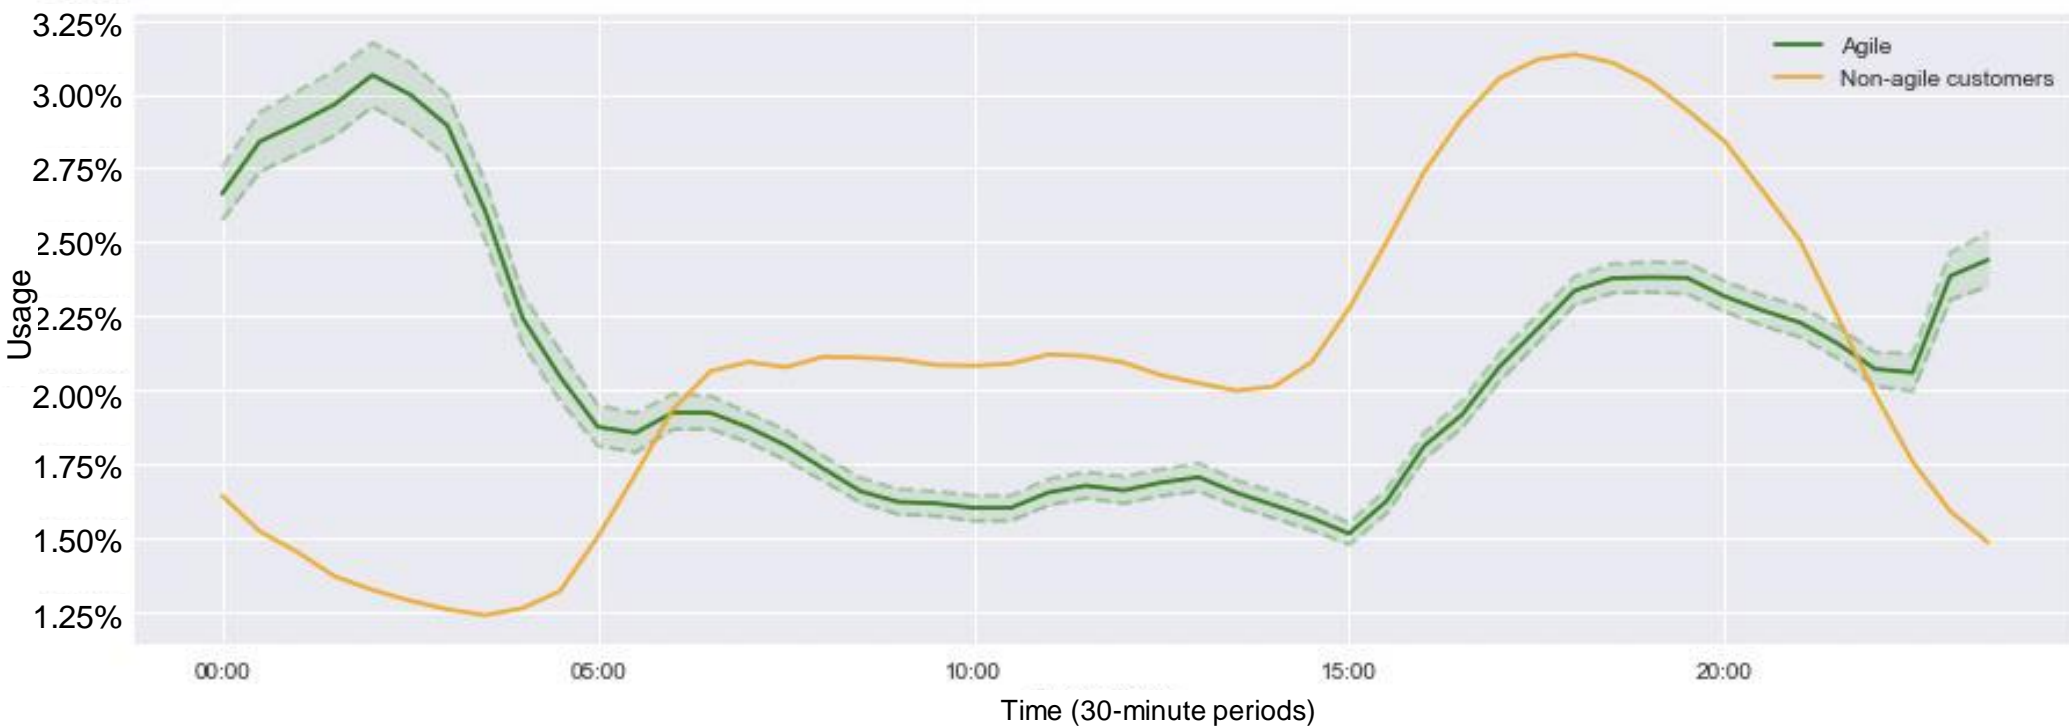

Agile Octopus consumers shifted consumption out of the peak period by 28%
And reduced CO2 emissions (UK Carbon Intensity data)

EV drivers demonstrate the greatest sensitivity to price signals

Electric Vehicle Agile Octopus customers reduced their peak-period consumption by 47%

Comparing Agile to all Octopus Customers

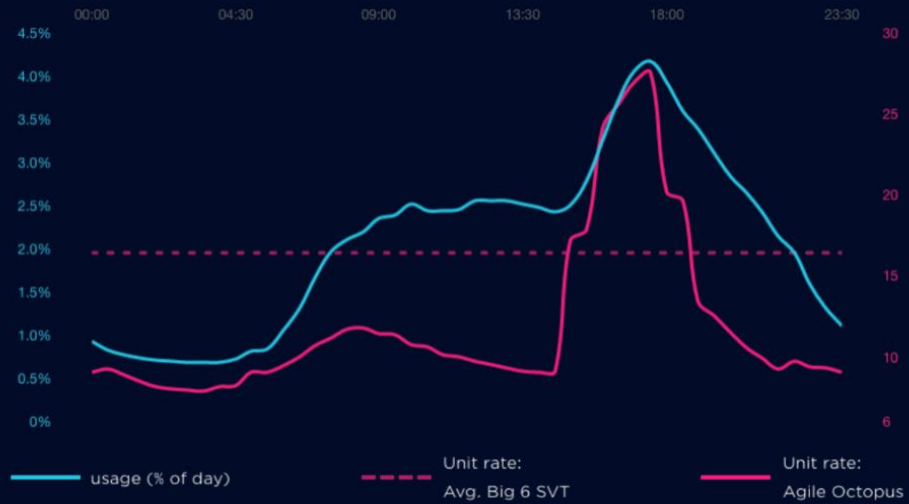

Agile Octopus customers have a markedly different consumption profile compared to all other Octopus customers – Agile works.

Challenges

- Technology
- Complex for consumer
- Impact on different consumer types
- Cannot give accurate projections
- Consumer behaviour change

Try it for yourself

Explore how shifting your electricity use could save you even more, using the profiles beneath the chart.

Half-hourly unit rates over the last 12 months, averaged across all regions (including VAT).

Update

Agile Octopus is the first tariff of its kind, so there's a few things you really ought to know:

1.

Agile Octopus is not for everyone.

Unit prices are set at 4pm for the following day according to wholesale costs, with a different price for every 30 minutes of every day. Prices may rise as well as fall.

If you prefer the security of fixed prices, you should consider our Fixed or Super Green Octopus tariffs.

2.

The variable nature of Agile Octopus means any prediction of future costs will be inaccurate and historical data will not predict future performance.

The cost explorer above is based on the average unit rates for the last 12 months, and in no way constitutes a guarantee of future rates.

3.

In the absence of half-hourly smart meter data, we will charge you as we would a customer on our Flexible Octopus variable tariff, based on typical [Profile 1](#) usage attribution.

4.

The in-home display of your smart meter will not display realtime prices, but it will show your consumption. You can check your prices at any time, from anywhere, in your online account

Make sure you've read and agree to the above

Sign me up

Key features

- Limited to 500 customers during trial period
- Can switch to any of our other tariffs instantly
- Can switch to any other supplier with no exit fees
